

We are at our best when the signal is at its worst.

With uncompromising functionality and reliability, our products are designed to meet the requirements for Remote, Industrial Automation and SCADA. Optimized for noisy, weak signal and high traffic radio spectrum environments, our proprietary "Tuned Modem Technology" recovers data accurately when the signal is at it's worst.

Longer Range Communication

While most systems utilize technology that reliably transmit over a couple of miles of perfect terrain. In the most rugged, obstructed conditions, the CD110 transmits reliably over long distances where other systems have always failed

Increased Reliability

We maintain system reliability that allows for over 90% successful transmissions for more than 10 years

Smaller, Cleaner Form Factor

All of the components are onboard. This reduces your footprint, # of wires, and number of external components by more than 70% every time. Our product comes in at only x lbs and has dimensions of LxWxH

Best Value

While most systems touting the same capability come in a \$50,000+ in a much bigger package, our system manages to outperform those systems at less than a third of the cost

Power Efficiency

The entire system can be powered from a solar panel and a 12 volt battery anywhere the sun shines

Versatility

The Swiss army knife of RTU/PLCs. This can act as your one stop shop for an automated, wireless, control and transmission system

Best Package

Comes complete with custom software at no additional charge!

Industry Best Technical Support

Backed by a Team that takes the time to solve your problems not give you more
